

Destiny and Civilization: The Evolutionary Explanation of Religion and History

Can world history be explained by means of Natural Selection? This book does, and specifically avoids Social Darwinism. The work chronicles the whole human story by showing how Natural Selection works on societies. It defines society as the maximum sized group we all intuitively use a common world-view and closed system of thinking to bind us into and which substitutes for the small hunting-gathering groups which millions of years of evolution evolved us to function in. The work is remarkable for its objectivity. In order to avoid institutional bias, the author re-interpreted the social science theory consensus interpretation of the data without using any of the twenty-one subjective word-use stratagems (see Appendix) commonly used in academic social theory, also by using key social science terms from a special Glossary in which all the terms are defined only one way, and most often functionally.
