

The Modern Factory: Safety, Sanitation and Welfare (Classic Reprint)

Excerpt from The Modern Factory: Safety, Sanitation and Welfare

There were in the United States, according to the census of 1909, 268,491 industrial establishments in which there worked 6,615,046 persons. These figures do not include a great many smaller workshops in stores, separate parts of industrial establishments and small domestic workshops. The modern factory is, therefore, a paramount economic force in the social and industrial life of the country and the nation. Factory and labor legislation, industrial relations between capital and labor, improvement of factory conditions and amelioration of the conditions of the large mass of American workers are the burning questions of the day and the most vital problems of the hour. The Federal government, the legislatures of individual states and many private social organizations throughout the country vie with each other in numerous inquiries, conferences, investigations, commissions, exhibits, etc., all bearing on the subject of industrial and factory conditions. The time is ripe for a treatise on the modern factory; for, in spite of all the intense interest in the subject of industrial and factory conditions, there is as yet no special book on this subject in the English language. An attempt is made in this book to give a comprehensive, although necessarily brief, review of the safety and sanitary conditions of factories and workshops as they are, and to indicate the methods of safety, sanitation, efficiency and welfare of factories and workshops as they should be. As sanitary inspector of the New York Health Department for a number of years, as student and teacher of sanitary science, as practitioner for twenty years in the most crowded section of the East Side in New York City, as author of a number of books on general sanitation and hygiene, the writer has had special opportunities for studying industrial workers and industrial conditions at first hand.
